Lead Scoring Framework

Fit + Intent Model

Single-score models collapse fit and intent into one meaningless number. Score them separately and the handoff to sales becomes obvious.

What's inside

- Fit vs intent scored independently
- Attribute weighting methodology
- Score decay and recency rules
- MQL threshold calibration
- Sales feedback loop design

Fit Score

- 01 Score firmographics: size, industry, geography, role
- 02 Derive weights from your actual closed-won data
- 03 Apply negative scores for disqualifying attributes
- 04 Keep it to six attributes or fewer

Intent Score

- 01 Score behaviour: pricing views, demo requests, repeat visits
- 02 Weight bottom-funnel actions far above content downloads
- 03 Count frequency and recency, not just occurrence
- 04 Cap any single action so it cannot dominate

Decay

- 01 Intent scores decay — fit scores do not
- 02 Halve intent score after 30 days of inactivity
- 03 Reset on a new high-intent action
- 04 Document the decay rule so sales understands it

Calibrate

- 01 Set the threshold from historical conversion rates
- 02 Review rejected MQLs with sales monthly
- 03 Adjust weights quarterly, not weekly
- 04 Track MQL-to-opportunity rate as the model's report card
