Marketing Funnel Audit Framework

Find the Leak

Most teams add traffic to a funnel that cannot convert it. This audit finds the constraint first, so effort goes where it compounds.

What's inside

- Stage-by-stage conversion benchmarks
- Leak diagnosis decision tree
- Fix priority by effort and impact
- Measurement gaps checklist
- Quick-win identification

Map The Stages

- 01 Define each stage by observable customer behaviour
- 02 Record the conversion rate between every adjacent stage
- 03 Identify the single lowest-performing transition
- 04 Confirm tracking exists at every step before diagnosing

Diagnose

- 01 Low traffic-to-lead: offer relevance or friction
- 02 Low lead-to-opportunity: qualification or follow-up speed
- 03 Low opportunity-to-close: pricing, proof, or process
- 04 High churn: onboarding or expectation mismatch

Prioritise

- 01 Fix the earliest severe leak first — later fixes compound onto it
- 02 Prefer changes you can ship in under two weeks
- 03 Estimate impact as leads gained, not percentage points
- 04 Do not run five experiments at once

Verify

- 01 Set a measurement window before making the change
- 02 Watch for downstream effects, not just the target metric
- 03 Re-audit quarterly — funnels drift
- 04 Document what worked for the next cycle
