Pricing & Packaging Workbook

Value-Based Pricing

Price is the fastest lever on profit and the least tested. This workbook covers how to research, structure, and change pricing without losing customers.

What's inside

- Willingness-to-pay research methods
- Three-tier packaging principles
- Value metric selection
- Discounting policy framework
- Price increase communication plan

Research

- 01 Interview customers about value received, not price preference
- 02 Use the four-question price sensitivity method
- 03 Segment by willingness to pay, not company size
- 04 Test with real offers, not hypothetical surveys

Structure

- 01 Pick a value metric that scales with customer benefit
- 02 Three tiers: entry, target, and anchor
- 03 Design the middle tier to be the obvious choice
- 04 Limit tier features to what buyers actually compare

Discounting

- 01 Set a maximum discount and require approval beyond it
- 02 Trade discount for something: term, volume, or a case study
- 03 Never discount without changing scope
- 04 Track realised price, not list price

Raising Prices

- 01 Give existing customers advance notice and a reason
- 02 Grandfather selectively, not universally
- 03 Increase value visibly before or alongside the increase
- 04 Expect and plan for a small churn spike

Want us to run this for you?

Squad Tech Solution is a full-service digital marketing agency. We design your homepage concept free — you see the work before you pay.
