

Product Photography Shot Guide

E-Commerce Shot Framework

Product photography converts when it answers questions: how big is it, what is it made of, what does it look like in use. Shoot for those questions.

What's inside

- Required angle checklist per product
- Scale and detail shot techniques
- Lifestyle context planning
- Marketplace technical specs
- Consistency rules across a catalogue

Core Angles

- 01 Front, three-quarter, side, back, and top as standard
- 02 One macro detail shot showing material or finish
- 03 One shot with a recognisable scale reference
- 04 Packaging shot if it forms part of the experience

Lifestyle

- 01 Show the product in the environment it will be used
- 02 Include a human element for scale and relatability
- 03 Style the scene without burying the product
- 04 Shoot verticals specifically for social use

Technical Specs

- 01 Minimum 2000px on the longest edge for zoom
- 02 Pure white background where marketplaces require it
- 03 Consistent colour temperature across the catalogue
- 04 Colour-accurate output — check against the physical product

Consistency

- 01 Lock camera height and distance per product category
- 02 Use the same lighting setup for the whole catalogue
- 03 Keep shadow direction identical across products
- 04 Document the setup so it can be recreated later
